

At Fandango Casino, they count on Thermo-shield's waterproofing performance for quite a **unique project.**

In side the casino is a feature called “The Tropical Rain Forest”. It is about 50 slot machine’s that are set with a bonus pay out feature that builds a side jackpot when the machines are played, which is awarded at random to an active player. This sets off a tropical storm inside the casino!

Lightening and Thunder and a torrential down pour of rain are cascaded from the ceiling in terrific amounts into a fiberglass pool in the center of the slot machines

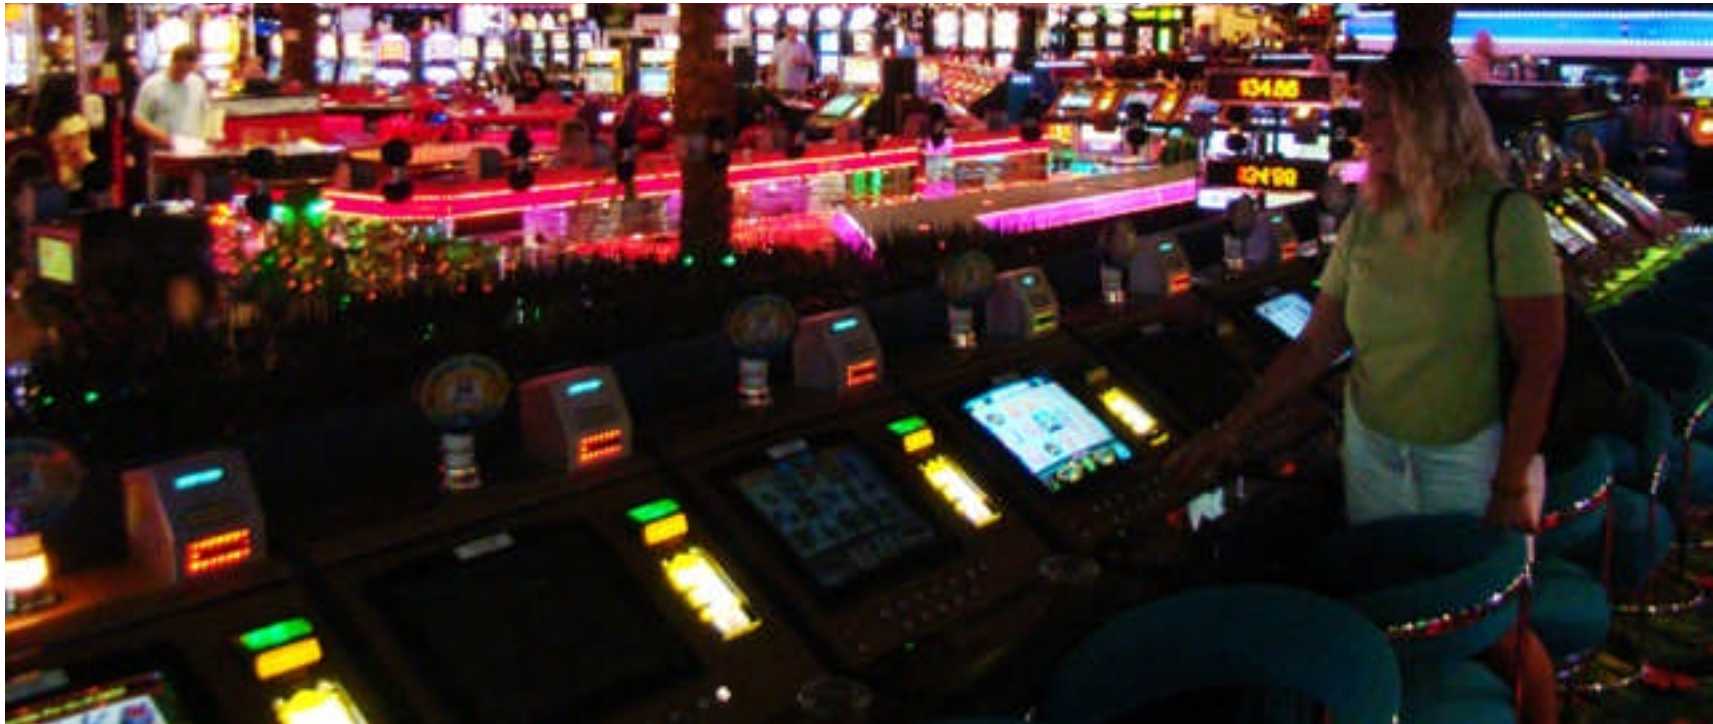

The tank has 2 walls to allow the inner tank to over flow the sides during the storm, where the water is recycled into the system.

And this is no small indoor tub... There are thousands of gallons of water contained here.

A comment from the facilities team was how little odor was created when applying the Thermo-shield. “We can’t even open a bucket of normal paint without having complaints from the public. The Thermo-shield was applied for several days and vented right into our air recirculation system, (a benefit of the pool is it adds humidity to the inside air) and no one even said a word. Amazing!”

The facilities management team is so pleased with the performance, they are putting Thermo-shield Exterior into their upcoming exterior painting plans.
